[Spanish version](#)

The value placed on the dissemination of the activity carried out by professionals in the field of biomedicine has been repeatedly pondered by the main editors of periodicals worldwide ¹⁻³. The areas in which the professional activity of healthcare professionals is carried out include assistance and care, fundamental, applied

and translational research, teaching in its different modalities and stages, as well as management and governance⁴⁻⁶. In addition, in view of the exceptional demand from society, a facet inherent to the dissemination of knowledge in intelligible terms and at high speed of dissemination in social networks has emerged with force^{7,8}.

Our position from a journal that has been in existence for two decades requires us to maintain the criteria of quality, including peer review of the original articles, continuity in its regular publication and the acceptance of works in different languages. As with any living project, it has not been immune to the difficulties inherent in the very practice of professionals, which has been affected to a considerable degree by the current Covid-19 pandemic, the dynamism of whose aetiology we have been able to collaborate in our journal⁹.

In writing this editorial, we would like to echo the demands of trying to communicate any relevant contribution to clinical and health care activity. Few exercises better shape the acquisition and development of skills than that which requires intelligible and useful writing in the scientific field. Part of the training of our professionals during their residency period or their stages as fellows and junior researchers involves a more or less intense, but essential,

dedication to writing and dissemination of their activity in the different biosanitary fields.

Our journal is committed to making room for as many contributions as we wish to see the light of day and be published, trying to align ourselves with the message of the Latin sentence *verba volant, scripta manent*¹⁰.
